Conversation: Clinical Trial / Cervical Spinal Cord Injury

The following information is related to a global Clinical Trial which we propose to conduct in Australia/New Zealand should sufficient interest be demonstrated.

A Phase IIb, Double-blind, Randomized, Placebo-controlled, Multicenter Study to Assess the Safety and Efficacy of Intraoperative Epidural CETHRIN® in Adult Subjects with Acute Cervical Spinal Cord Injury.

The purpose of this email is to identify potential sites/investigators that can perform surgery within 72 hours of injury, standards of care and key opinion leaders in the field of spinal cord injury.

Some of the recipients on this email are primary contacts representing professional bodies and institutions and **I'd request that this information is passed on to as many of your colleagues as possible. Alternatively, I'd be happy to receive contact details of possible interested investigators.**

Interested parties are encouraged to contact me via email. Additional trial information will then be made available.

Regards

Gary R McNicol
